

## Legal and Policy Framework related to CO2

1. Brief description of **current situation** of CO2 emissions (level, sources of emissions, etc.)
2. Recent emission **trends** (changes over recent years, why are changes as they are?)
3. **Legal and regulatory framework** (Air Pollution Control) related to CO2 (include all the different fields which cause emissions (such as transportation, industry, agriculture, etc.)
4. **Planning policy guidelines and regulations** related to CO2 emissions (national, regional and local level)

For each legal or policy measure, specify :

- **The objective and/or activity affected** (reduction of overall energy consumption, reduction of CO2 emissions from heating/fossil fuel consumption, promotion of ecological practices, etc.)
- **The type of instruments** (legal, voluntary agreements, economic incentive tax, subsidies, etc.)
- **The status** of the policy or measure (adopted, implemented, in force, under public consultation, suspended, etc.)
